

The National Assessment of Educational Progress (NAEP) assesses mathematics in five content areas: number properties and operations; measurement; geometry; data analysis and probability; and algebra. The NAEP mathematics scale ranges from 0 to 500.

Overall Mathematics Results for Oregon

- In 2007, the average scale score for fourth-grade students in Oregon was $236. \ \ This$ was not significantly different from their average score in 2005(238) and was higher than their average score in 1996 (223).1
- Oregon's average score (236) in 2007 was lower than that of the nation's public schools (239).
- Of the 52 states and other jurisdictions that participated in the 2007 fourth-grade assessment, students' average scale score in Oregon was higher than those in 9 jurisdictions, not significantly different from those in 12 jurisdictions, and lower than those in 30 jurisdictions.²
- The percentage of students in Oregon who performed at or above the NAEP Proficient level was 35 percent in 2007. This percentage was not significantly different from that in 2005 (37 percent) and was greater than that in 1996 (21 percent).
- The percentage of students in Oregon who performed at or above the NAEP Basic level was 79 percent in 2007. This percentage was not significantly different from that in 2005 (80 percent) and was greater than that in 1996 (65 percent).

^a Accommodations were not permitted for this assessment.

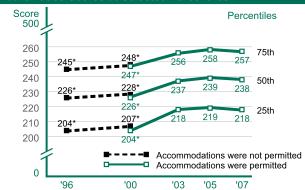

NOTE: The NAEP grade 4 mathematics achievement levels correspond to the following scale points: Below Basic, 213 or lower; Basic, 214-248; Proficient, 249-281; Advanced, 282 or above.

Performance of NAEP Reporting Groups in Oregon: 2007						
	Percent	Average	Percent	Percent of students at or above		Percent
Reporting groups	of students	score	below Basic	Basic	Proficient	Advanced
Male	51	238	20	80	38	6
Female	49	234 ↓	23	77	32	3
White	71	241	15	85	40	5
Black	3	219	41	59	16	1
Hispanic	17	217	46	54	12	1
Asian/Pacific Islander	5	249	12	88	53	14
American Indian/Alaska Native	2	220	39	61	18	2
Eligible for National School Lunch Program	44	226 ↓	32	68	21	1
Not eligible for National School Lunch Program	53	245	12	88	47	7

Average Score Gaps Between Selected Groups

- In 2007, male students in Oregon had an average score that was higher than that of female students by 4 points. In 1996, there was no significant difference between the average score of male and female students.
- In 2007, Black students had an average score that was lower than that of White students by 22 points. Data are not reported for Black students in 1996, because reporting standards were not met.
- In 2007, Hispanic students had an average score that was lower than that of White students by 24 points. In 1996, the average score for Hispanic students was lower than that of White students by 29 points.
- In 2007, students who were eligible for free/reduced-price school lunch, a proxy for poverty, had an average score that was lower than that of students who were not eligible for free/reduced-price school lunch by 20 points. In 1996, the average score for students who were eligible for free/reduced-price school lunch was lower than the score of those not eligible by 21 points.
- In 2007, the score gap between students at the 75th percentile and students at the 25th percentile was 39 points. In 1996, the score gap between students at the 75th percentile and students at the 25th percentile was 41 points.

NOTE: Scores at selected percentiles on the NAEP mathematics scale indicate how well students at lower, middle, and higher levels performed.

Rounds to zero.

- ‡ Reporting standards not met.
- * Significantly different from 2007.

† Significantly higher than 2005. | Significantly lower than 2005.

1 Comparisons (higher/lower/narrower/wider/not different) are based on statistical tests. The .05 level was used for testing statistical significance. Statistical comparisons are calculated on the basis of unrounded scale scores or percentages. Comparisons across jurisdictions and comparisons with the nation or within a jurisdiction across years may be affected by differences in exclusion rates for students with disabilities (SD) and English language learners (ELL). The exclusion rates for SD and ELL in Oregon were 2 percent and 1 percent in 2007, respectively. For more intormation on NAEP significance testing see http://nces.ed.gov/nationsreportcard/mathematics/interpret-results.asp#statistical.

² "Jurisdictions" refers to states and the District of Columbia and the Department of Defense Education Activity schools.

NOTE: Detail may not sum to totals because of rounding and because the "Information not available" category for the National School Lunch Program, which provides free and reduced-price lunches, and the "Unclassified" category for race/ethnicity are not displayed. Visit http://nces.ed.gov/nationsreportcard/states/ for additional results and detailed information.
